

Claims

1. A water repellent slide fastener, comprising a pair of zipper tapes (25, 26), to which are secured fastening elements (21, 22) which are unfastenable and fastenable through the intermediary of a zipper slide (30), said zipper tapes (25, 26) being water repellent, **characterized** in that the first and second zipper tapes (25, 26) are secured to the fastening elements (21, 22) asymmetrically relative to each other, such that the first one (25) extends, in the form of an extension (25X) crossing a centre line between the tooth elements, over the second zipper tape (26) to overlap a part of the second zipper tape (26).
2. A slide fastener as set forth in claim 1, **characterized** in that the extension (25X) of one zipper tape (25) overlaps the other zipper tape (26) over the distance of 1-5 mm, commencing from the edge of the zipper tape (26) closer to the fastening elements (22).
3. A slide fastener as set forth in claim 1 or 2, **characterized** in that said extension (25X) substantially conceals the slide fastener's fastening elements (21, 22).
4. A slide fastener as set forth in claim 1, **characterized** in that the zipper tape (25, 26) has its stiffness adapted to be such that the extension (25X) of one zipper tape (25) applies at least a small weight against the other zipper tape (26).
5. A zipper slide (30) for use in association with a slide fastener as set forth in claim 1, **characterized** in that the zipper slide (30) has one (32) of its body members formed with a recess (33X) for the extension (25X) of the zipper tape (25).

6. A zipper slide (30) as set forth in claim 5, **characterized** in that the recess of the zipper slide (30) has a width of 1-5 mm and a depth of 0,2-0,8 mm, whereby the extension element (25X) of one zipper tape (25) presses against the other zipper tape (26).

5

7. A slide fastener as set forth in any of claims 1-6, **characterized** in that a slide fastener (13) is fitted to an article (10), e.g. a garment, a shoe, a bag, or the like, in such a way that the zipper tape (25) has its extension (25X) positioned such that gravity denies the migration of water into possible gaps
10 between the slide fastener's (13) fastening elements (21, 22) and/or into the slide fastener's centre slot.
